

Excel Assignment 2 – Data Cleaning and Transformation

1. Handling Missing Values

- Checked the data set for missing values in the price and category columns.
- Missing prices kept blank because the actual prices were not available
- Missing categories were filled based on the type of product.

2. Inconsistent Data

- Checked the product name column and corrected inconsistent capitalization.
- Corrected the category “Electroni” to “Electronics”.

3. Duplicate Values

- Checked the dataset for duplicate records.
- 3 duplicate rows were removed using the remove duplicate option.
- After removing the duplicates 31 unique records remained.

4. Splitting and Merging Data

- Product ID was separated into Manufacturing Date and Country Code.
- Product Name and Brand name were combined to create the Product Brand column.

5. Formatting

- Price was formatted in US Dollar \$ with two decimal places.
- Manufacturing Date was changed to DD-MM-YYYY format.

6. Conditional Formatting

- Data Bars were added to the Price column to compare the prices easily.
- The Electronics category was highlighted using conditional formatting
